## **ABSTRACT**

Mental health is a critical issue among university students, often affecting their academic performance and overall well-being. The Mood Board-Based Psychological Support System is an interactive platform designed to provide students with a space to visually express their emotions, share their mental state, and receive peer and alumni support. The system allows students to create mood boards based on themes that represent their emotions, fostering a sense of connection and shared understanding. Supporters, including fellow students and alumni, can engage by commenting on mood boards, offering words of encouragement, and sharing personal experiences. The platform integrates essential features such as user authentication, mood board management, moderation tools, and a commenting system. By utilizing a structured database, the system ensures efficient data management and scalability. This project aims to bridge the gap between students seeking emotional support and those who can provide guidance, ultimately promoting mental well-being in academic institutions.

## **UNDERTAKING:**

It is certified that the work presented/proposed in this proposal will be performed by the group comprising four members from FCSE, Computer Science major of batch 33. The work would be performed with the best knowledge attained in the course CS-232, while satisfying all the adequate requirements and would be submitted in due course of allotted time.

## INTRODUCTION

Mental health is a growing concern among university students due to academic stress, personal struggles, and social pressures. The proposed system offers a platform where students can visually represent their emotions through mood boards. Supporters, including alumni and other students, can provide feedback and guidance. The system integrates multiple relational tables to manage users, mood boards, comments, and interactions efficiently.

---

## SYSTEM FEATURES

1. **User Management:** Registration and authentication for students, alumni, and supporters.
  2. **Mood Board Creation:** Students can create mood boards with themes and share them.
  3. **Commenting System:** Users can interact and provide support through comments.
  4. **Alumni and Supporters' Role:** Alumni can offer guidance based on their experiences.
  5. **Moderation Features:** Certain users have moderation privileges to manage inappropriate content.
- 

## TECHNOLOGY USED

- **Frontend:** React.js, HTML, CSS, JavaScript
- **Backend:** Node.js with Express.js
- **Database:** MySQL (Relational Database Management System)
- **Authentication:** JWT-based authentication for secure login
- **Hosting:** Cloud-based deployment using AWS or Firebase

## ENTITY-RELATIONSHIP MODEL

**NOTE: THE ER DIAGRAM AND THE RELATIONAL TABLES DRAWN ARE TENTATIVE AND SUBJECT TO CHANGE AS PER THE PROGRESS AND REQUIREMENTS DURING THE COURSE OF THE PROJECT.**

Based on the provided ER diagram, the system consists of the following relational tables:

## 1. User Table

| Column Name | Data Type                               | Description             |
|-------------|-----------------------------------------|-------------------------|
| user_id     | INT (Primary Key)                       | Unique ID for each user |
| name        | VARCHAR                                 | User's full name        |
| email       | VARCHAR                                 | User's email address    |
| password    | VARCHAR                                 | Hashed password         |
| cnic        | VARCHAR                                 | Identification number   |
| user_type   | ENUM ('Student', 'Supporter', 'Alumni') | Type of user            |

## 2. Mood Board Table

| Column Name  | Data Type         | Description                               |
|--------------|-------------------|-------------------------------------------|
| moodboard_id | INT (Primary Key) | Unique ID for each mood board             |
| user_id      | INT (Foreign Key) | ID of the user who created the mood board |
| theme        | VARCHAR           | Theme of the mood board                   |
| date_created | DATETIME          | Timestamp of mood board creation          |

## 3. Comment Table

| Column Name  | Data Type         | Description                             |
|--------------|-------------------|-----------------------------------------|
| comment_id   | INT (Primary Key) | Unique ID for each comment              |
| moodboard_id | INT (Foreign Key) | ID of the mood board being commented on |
| user_id      | INT (Foreign Key) | ID of the user who posted the comment   |
| comment_text | TEXT              | Content of the comment                  |
| date_posted  | DATETIME          | Timestamp of comment posting            |

#### 4. Moderation Table

| Column Name  | Data Type         | Description                       |
|--------------|-------------------|-----------------------------------|
| moderator_id | INT (Primary Key) | Unique ID for each moderator      |
| user_id      | INT (Foreign Key) | ID of the user who is a moderator |
| moodboard_id | INT (Foreign Key) | ID of the mood board they manage  |

#### 5. Alumni Table

| Column Name     | Data Type         | Description               |
|-----------------|-------------------|---------------------------|
| alumni_id       | INT (Primary Key) | Unique ID for each alumni |
| user_id         | INT (Foreign Key) | ID of the alumni user     |
| graduation_year | YEAR              | Year of graduation        |

### PROJECT TIMELINE

| Date Range          | Task                                                                             |
|---------------------|----------------------------------------------------------------------------------|
| April 6 - April 8   | Project planning, finalizing requirements, and team discussions.                 |
| April 9 - April 12  | Database schema design and setup, ER model refinement.                           |
| April 13 - April 16 | Backend development: API creation, authentication system, database connectivity. |
| April 17 - April 20 | Frontend development: UI design, mood board creation, commenting system.         |

| Date Range          | Task                                                             |
|---------------------|------------------------------------------------------------------|
| April 21 - April 23 | Integration of frontend and backend, API testing, and debugging. |
| April 24 - April 26 | Feature enhancements, security improvements, and UI refinements. |
| April 27 - April 29 | Final testing, bug fixes, and performance optimization.          |
| April 30 - May 1    | Project documentation, final review, and submission.             |

## VISION

### 1. What is your product, on a high level?

The product is a psychological support platform designed for university students, allowing them to express emotions through mood boards while receiving feedback and encouragement from peers and alumni.

### 2. Whom is it for?

This platform is designed for university students who seek emotional support, as well as alumni and supporters who want to assist current students with guidance and encouragement.

### 3. What problem does it solve?

The project addresses the lack of emotional expression and peer support systems for students. It provides a safe space where students can visually express their emotions, receive feedback, and connect with experienced individuals.

### 4. What alternatives are available?

Alternatives include mental health forums and social media groups, but these often lack dedicated university-based support, structured mood board creation, and moderation features.

### **5. Why is this project compelling and worth developing?**

The platform promotes student well-being and mental health awareness. It leverages the experience of alumni to provide valuable guidance. Additionally, it integrates a structured, interactive way for students to express emotions and seek support.

---

## **CONCLUSION**

The Mood Board-Based Psychological Support System is an innovative approach to addressing student mental health challenges. Through a structured database and interactive features, it fosters a community of emotional well-being. The use of a relational database ensures scalability, security, and efficient data management. This project has the potential to significantly impact student mental health by creating a supportive and interactive environment.
